

Embed an Audioboo reader on Twinspace

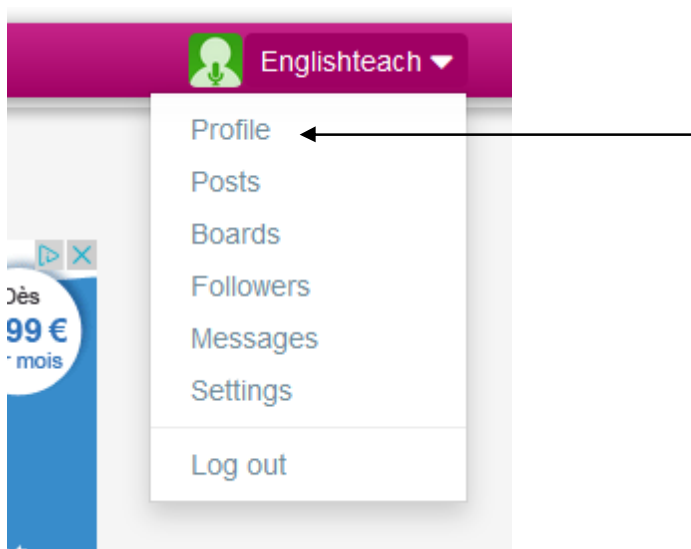

<http://audioboo.fm>

Once you have logged in, first upload your file :

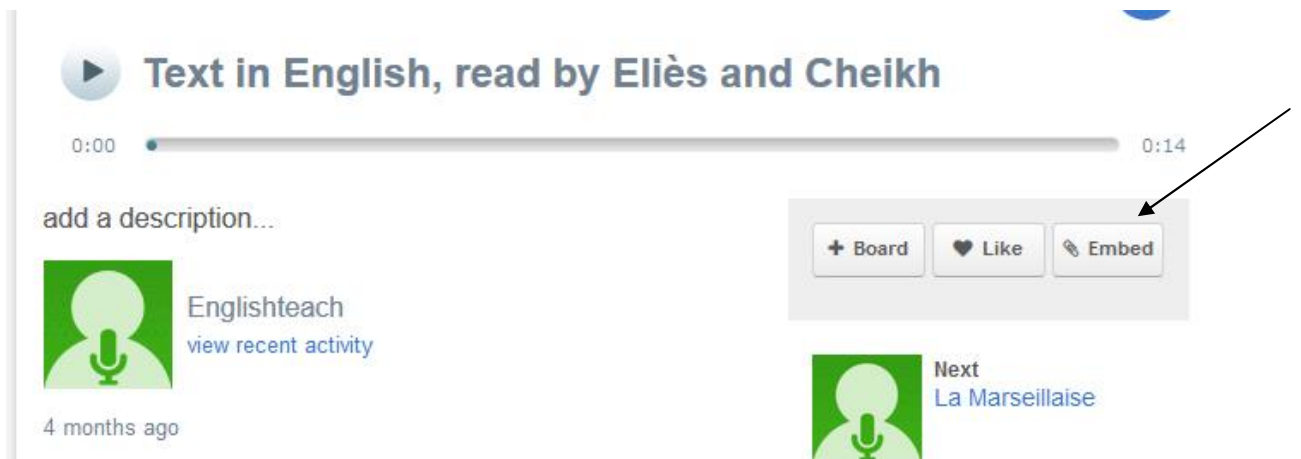

Select your file, add a title and upload it. You will have to wait for a few minutes, depending on the weight of the file, before it is uploaded and processed.

Once your file has been processed, you can find it on your profile :

Click on the title of your file, and then click on « embed » :

The screenshot shows an audio player interface. At the top, there is a play button and the title "Text in English, read by Eliès and Cheikh". Below the title is a progress bar showing 0:00 to 0:14. Underneath the progress bar is a text input field labeled "add a description...". To the right of the description field is a button labeled "Embed" with a right-pointing arrow. Below the description field is a profile picture of "Englishteach" with the text "view recent activity" and "4 months ago". To the right of the profile picture is another profile picture of "Next La Marseillaise".

A new window will open, with an embed code which you have to copy :

The screenshot shows a window titled "Embed 'Text in English, read by Eliès and Cheikh'". Below the title is a heading "Copy & paste the below code into your blog to embed". Below the heading is a code block containing the following HTML code:

```
<div class="ab-player" data-boourl="https://audioboo.fm/boos/1744659-text-in-english-read-by-elies-and-cheikh/embed?eid=AQAAAAP5cH1MTnxoA" ><a href="https://audioboo.fm/boos/1744659-text-in-english-read-by-elies-and-cheikh">listen to &#x2018;Text in English, read by Eliès and Cheikh&#x2019; on Audioboo</a></div><script type="text/javascript">(function() { var po = document.createElement("script"); po.type = "text/javascript"; po.async = true; po.src = "https://d15mj6e6qmt1na.cloudfront.net/assets/embed.js"; var s = document.getElementsByTagName("script")[0]; s.parentNode.insertBefore(po, s);
```

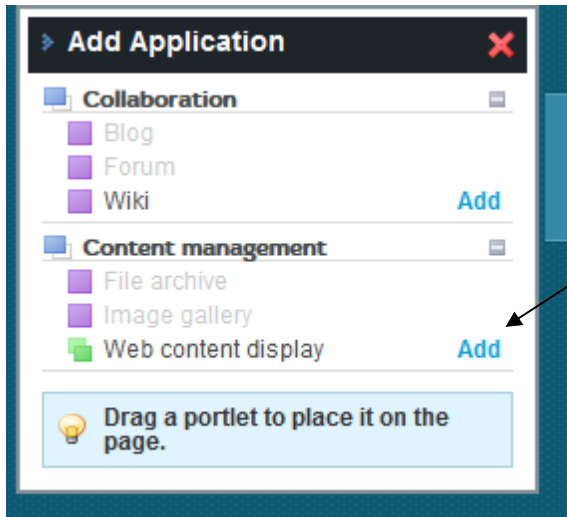

Below the code block is a "Preview" section showing a smaller version of the audio player interface. It includes a play button, the title "Text in English, read by Eliès and Cheikh", a progress bar, and social media sharing buttons for "Like" and "Tweet".

It's now time to embed this code on TS ò

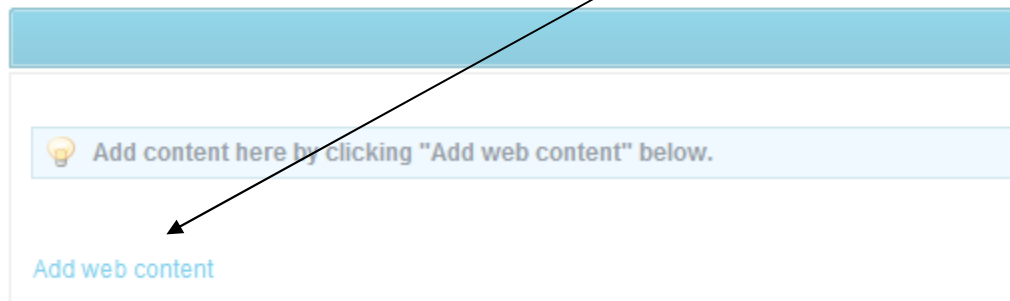

Launch Twinspace, select the activity in which you want to upload your audio file, and add a « webcontent » :

The screenshot shows the Twinspace interface. At the top, there is a header with "Activities" and "My school my country". Below the header is a list of activities, including "Sept/Oct 2013_Collège" and "Blog". To the right of the "Blog" activity is a button labeled "Add Application" with a right-pointing arrow.

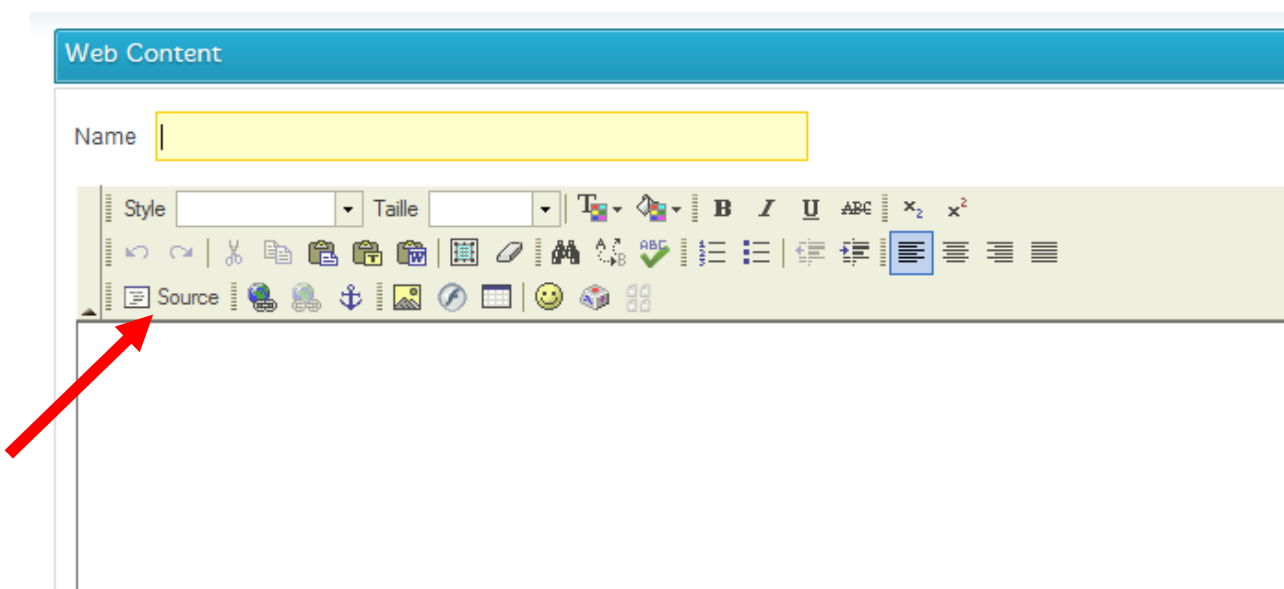

My school my country

Now here's the final, and most important part :

Once you have titled your webcontent, you have to turn to « source mode » before pasting the code you copied from Audioboo :

You can add text before or after the code if you want to, then « save », and your file will appear in an Audioboo reader in your webcontent.

(Note that you can do exactly the same in a blog entry instead of a webcontent, depending on where you want to drop your file ò The essential point is to turn to « source mode » before copying a code.

If you want to embed a video you have loaded on Youtube, or embed photos you have uploaded on a photo service such as Flickr, just follow the same steps. This way, the video / photos will show directly on TS, the partners won't have to download them on their computer.)
