WORK TRAINING STAGES

Pininfarina

Istituto Tecnico Industriale Statale

As the labor market becomes more and more specialized and economies demand higher levels of skill, our students are required to spend some time in the world of work, putting into practice what they theoretically learn during their school lessons.

For this reason, every year, our 4th grade students spend a fortnight working in factories, either during the school year or during their holidays, to develop "procedural knowledge", that's to say the knowledge exercised in the performance of some task, what is commonly known as "know-how", the knowledge of how, and especially how best, to perform some task.

This short apprenticeship period, called "stages", is considered a fruitful teaching experience.

On February 14th, the morning was dedicated to the experiences our students had in factories and companies during 2013. Accompanied by their company tutor, the students have reported their younger schoolmates their own experience, what they learnt and performed during this important period of training and growth.

The meeting has been introduced by Ms Paola Barbero, School and University Dept. Responsible of the Industrial Union of Torino and managers of the companies that have trained our students have spoken about the importance of a responsible preparation for the future.

The following industries and companies were present: Blue Engineering & Design, Comutensili, Digim@int, Farid Industrie, Flexball Italiana, GP Tecno, MC Team, Nogap, PRC Multimedia, Sistemi Professione Informatica, Step SpA.
