June 2011

Tudo brano princípalu

- Collège Antonin Perbosc, LAFRANCAISE, France
- OŠ Preska, MEDVODE, Slovenia
- Meldrum School, OLDMELDROM, United Kingdom
- Základná škola Ivana Branislava Zocha, REVÚCA, Slovakia
- CEIP Narciso Alonso Cortés, VALLADOLID, Spain
- Istituto Comprensivo M. Buonarroti, MARINA DI CARRARA, Italy
- Queen Mary School, SIBIU, Romania

Activities

- **Survey of weather conditions** and laboratory experiments
- **Exchanges data** in the etwinning workspace
- **France Meeting:** science workshops and presentations of activities report
- **Light Experiments/Activities** - each partner school prepared three experiments for three different age groups
- **Each partner choosed** experiments from each country. Each school carried out three different types of experiments.
- **The results of the experiments/activities** recorded in various formats and uploaded in Twin-space
- **Romanian meeting:** science workshops and presentations of activities report

Second meeting (9th–13th February 2011) Collège Antonin Perbosc, Lafrançaise, France

During the second meeting the cooperation between the project coordinators was improved and other teachers have been involved. In some cases French teachers have allowed their European colleagues to support their ordinary activities.

The pupils followed the lessons of French teachers with great enthusiasm and they took part in interesting workshops. actively .

In the French school we found spacious and comfortable classrooms and very well equipped laboratories, the staff was wonderful!

Cultural and scientific visits were organized to the "City of space" in Toulouse and to the town of Moissac and to its cathedral.

The welcome given by the authorities of the small town to the foreign delegations was particularly warm and appreciated.

Third meeting (25th -29th May 2011) Queen Mary School, Sibiu, Romania

On May 26th, for the opening of the third meeting, the partners met the Romanian teachers and students at "Queen Mary School" in Sibiu.

All the Romanian teachers and students of the school made us a warm welcome and each foreign guest was supported by a tutor.

At the beginning all the partners showed their works about light and eco-garden. The students presented the slides or the books about their experiences.

That day and the following the partners took part in some workshops and lessons about scientific topics:

- 1) Astronomy for kids
- 2) Friendly science
- 3) Spektra and mirror
- 4) Sounds world
- 5) Water and colour
- 6) About life
- 7) Play and learn
- 8) Plants and their life.

All the pupils were involved in the experiments by Romanian students and teachers. They were asked to try the experiments to give hypothesis or to answer questions.

Science was also very "amusing" with the Magic cups, the Levitation box, the Mini-rocket of tea bags and the electric bugs.

During this stay in Sibiu, students and teachers visited the National History Museum, the Pharmaceutical Museum, the Weather Data Collection Station and a Hydroelectric power Station. All these visits were really interesting for the students.

Conclusions

- The exchange of teaching experiences through the web are continuing
- The exchanges in the twinspace between students were started: they continue to communicate with each other via email
- The European dimension of schools and local communities involved is growing more and more
